OBJECTIVES

Data Analyst and Machine Learning enthusiast with hands-on experience in Python, SQL, Power BI, and Machine Learning. Skilled in data visualization, predictive modeling, and business intelligence, with a passion for transforming data into actionable insights.

EDUCATION

Sri Ramakrishna College of Engineering

Nov 2022 - May 2026

Bachelor of Engineering in Computer Science and Engineering

CGPA: 8.3

SKILLS

Programming: Python, SQL (Oracle SQL).

Python Libraries : Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn.

ML Tools : Linear Regression, Logistic Regression, GridSearchCV, Decision Tree, Random Forest, XGBoost, Support Vector Machine (SVM), KNN, KMeans, SMOTE, RandomUndersampling.

Visualization: Power BI, Excel.

Big Data : File System, HDFS, Pyspark, LINUX Commands, Hadoop commands, ETL.

Tools: Git, GitHub, Jupyter Notebook, VS Code

PROJECTS

Main Project

Super Store Sales Dashboard

April 2026

- Designed and developed an end-to-end Sales Analytics Dashboard using Power BI, DAX, and Power Query.
- Analyzed sales, profit, customer, product, and city-level performance through interactive dashboards and KPI tracking.
- Implemented forecasting, filtering, and business intelligence reporting to generate actionable insights from sales data. 🌐 [Project Link](#)

Medical Disease Diagnosis

Jan 2026

- Developed a CNN-based disease diagnosis system capable of analyzing medical images for automated disease detection and classification.
- Applied image processing and machine learning techniques to enhance medical images and identify abnormalities such as tumors and fractures.
- Implemented encryption-based protection for patient data and integrated a patient appointment management system.

- Technologies Used: Python, SQL, CNN, FL, ECC, and ML Algorithms. [🔗 Project Link](#)

Citizen Health Analysis

April 2026

- Cleaned and analyzed 5,000+ citizen health data using Python and EDA techniques.
- Analyzed 5,000+ health records and identified key risk factors associated with diabetes.
- Visualized findings using Matplotlib and Seaborn to generate actionable insights.
- Technologies Used: Python, EDA, Pandas, Seaborn, Matplotlib. [🔗 Project Link](#)

Churn Model Prediction

May 2026

- Developed a Customer Churn Prediction model using Machine Learning algorithms including Logistic Regression, Decision Tree, KNN, and XGBoost.
- Performed EDA, feature engineering, encoding, scaling, and class imbalance handling using SMOTE and Random Under Sampling.
- Built automated ML pipelines and improved churn prediction performance through preprocessing and model optimization. [🔗 Project Link](#)

INTERNSHIP

Data Science Intern | Q Spiders

Dec 2025 - Present

- Worked on data analytics and machine learning projects using Python, SQL, and Scikit-learn.
- Applied data preprocessing, exploratory data analysis (EDA), and visualization techniques using Pandas, NumPy, Matplotlib, and Seaborn.
- Built interactive Power BI dashboards and optimized SQL queries using Power Query and DAX to derive meaningful insights from data.

Workshop

Data Science Technical Workshop

Mar 2025 - 2 Days

- Gained practical experience and foundational knowledge in Data Science
- Learned basic statistics and technical concepts through real-time problem-solving activities

ACHIEVEMENTS

- Presented research paper on Healthcare AI and Medical Image Diagnosis.
- Participated in National Level Conference on Fog Computing Using Industry 5.0.
- Completed Data Science and Machine Learning training with hands-on projects.

CERTIFICATION

- DELOITTE - Data Analytics Job Simulation [🔗 Link](#)
- TATA - Data Visualisation: Empowering Business with Effective Insights. [🔗 Link](#)
